

PREVENTATIVE MAINTENANCE

**Testing, Cleaning, Baking, Bearing,
Replacement, Re-Insulation,
Feedback Assessment, Re-Alignment**

Preventative Maintenance is your best and most important defense against the **high costs** and **lost time** due to Servo Failure. Often, a contaminated servo motor shows ill effects **months prior to failure**.

KJ can easily assess, in the field, whether the problem with your system is a result of a faulty drive, motor, cable, or other parts, saving you valuable time and effort.

See the chart of proactive vs. reactive savings below:

<u>PROACTIVE</u>	VS.	<u>REACTIVE</u>
Call KJ Servo Field Service	ACTION	Remove Servo Motor
Motor tested in field	RESULT	Motor sent for repair
Failure Cause Determined	SOLUTION	Installed new motor (haven't solved initial problem)
6	LABOR HOURS SPENT	15
4	DOWNTIME HOURS LOST	24
4	PRODUCTION HOURS LOST	24
Service Call & Repair Part	COST	New Servo Motor
SOLVED	PROBLEM	NOT SOLVED

KJ Electric stocks many parts, including:
Stators, Encoders, Resolvers, and Rotors,
from which many configurations can be made and repairs done with ease.
